ISO 50001

ENERGY MANAGEMENT SYSTEM

ISO 50001 is an international energy management standard and a framework for improving energy performance.

By implementing an ISO 50001 and certifying demonstrates that your organisation has a healthy energy management system for saving energy, cut costs and reduce environmental impact.

Effective energy management is an advantage both for your business and the environment. Through systematic examination of your energy use and consumption, you can identify areas with an untapped potential for energy reduction.

Most of the energy savings is achieved through changes in how energy is managed in an organisation, rather than through installation of new technologies. ISO 50001 provides a clear management framework to continually improve energy performance.

Through RoyalCert certification; you can instil confidence to your stakeholders about your commitment to continual improvement, consistent energy preservation and your attention to legal requirements.

What is ISO 50001?

The ISO 50001 standard aims to:

- Assist organisations in improving energy efficiency, energy use and consumption.
- Create transparency and facilitate communication on the management of energy resources.
- Promote energy management best practices and behaviours.
- Assist facilities in evaluating and prioritising the implementation of new energy-efficient technologies.
- Provide a framework for promoting energy efficiency throughout the supply chain.
- Facilitate reduction of greenhouse gas emissions and other adverse impacts from energy use.

ISO 50001 is designed to be compatible and harmonised with other recognised management system standards, such as ISO 14001 for environmental management systems and ISO 9001 for quality management systems. It is therefore ideal for integrating into existing management systems and processes.

Why is certification good for my business?

Certification to ISO 50001 shows your customers, employees and stakeholders that efficient use of energy is prioritised in your organisation and that energy is managed systematically.

Implementation of an energy management system can contribute to:

- Improvement of energy performance, including energy efficiency, use and consumption.
- Reducing environmental impact, including greenhouse gas emissions, without affecting operations and simultaneously increasing profitability.
- Continual improvement of the energy management systems.
- Ensuring measurement, documentation, reporting and benchmarking of energy consumption.
- Credible market communication about energy performance efforts. One of the most important things to remember is that development, implementation, and certification of an energy management system is a continuous journey, with the certification audit representing one element of a continuous improvement process.

Why Choose RoyalCert?

RoyalCert being a DAkkS (German) accredited certification body helps your organization demonstrate compliance to the standard requirement by issuing an internationally recognized certificate.

With our presence in your country, we are well equipped with your local requirements, easily reached, charging local rates and always ensuring you get a prompt and responsible response from us every time.
